## 2. Management of the various types of degradable and non-degradable waste

### Waste management at campus:

Waste is a clear contaminant that contributes to landfills and poisons that impair the earth's soil and environment. Because SVKM'S IOT is concerned about the environment, it actively encourages this knowledge among its students and staff by emphasizing cleanliness and hygiene on campus. Garbage is managed through a systematic procedure in which waste is separated into biodegradable and non-biodegradable wastes, as well as toxic and non-toxic wastes, and properly disposed of in laboratories. The exam section saves no longer-in-use papers and shreds them at regular intervals during the academic year. The SVKM'S IOT NSS team aggressively promotes waste management awareness through seminars and verbal campaigns.

Management of liquid waste, solid waste, and electronic waste are all practises at the institute. The college has a well-defined trash disposal mechanism and uses the following measures to educate students and staff about it:

#### I) Solid waste management:

The Institute follows best management practices for managing solid waste on campus. At the point of generation, the rubbish collected is divided. Separate trash cans for dry and moist waste are located in each corner of the hallway, restrooms, and common area. Additionally, dry trash bins can be found in libraries, classrooms, and laboratories. The municipal waste collection company collects and treats the wet and dry trash.

The examination section employs a number of creative tactics, such as the usage of one-sided papers for the seating chart and notice board work. The examining section will plan performs paper shredding after five years. Old publications, used papers and journal files, workshop scrap, and other materials are given to outside organizations for recycling.

**II) E-waste management:**

Since the institution is very new, no particular type of E-waste has been produced, but various sorts of electronic gadgets are being developed and marketed as a result of technological advancements. After a few months or years, these products become obsolete. Because these goods include hazardous compounds such as lithium, lead, zinc, and other metals, incorrect disposal of these products is hazardous to living things. As a result, E-waste management is a critical issue. E-waste management comprises gathering all electronic garbage produced on campus, keeping it in a centralized area, and recycling it. The college promotes the old PC Replacement activity and provide old PC for personal use to employees with minimum cost its help to E-waste management
